

JUSTIN IAN SEGUNDO

FULL-STACK DEVELOPER

Philippines | justinian.segundo1@gmail.com | 09568854901 | github.com/justinsegundo | linkedin.com/in/justinsegundo | j-segundodev.netlify.app

PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience building, maintaining, deploying, and supporting production web applications used in real business operations. Strong background in Laravel, PHP, React, TypeScript, MySQL, Ubuntu Linux, Git-based releases, and legacy-system modernization. Experienced in production troubleshooting, database investigation, workflow development, and safe deployment practices. Open to remote, part-time, freelance, and full-time opportunities.

CORE SKILLS

Backend: PHP, Laravel, CodeIgniter, REST APIs, Blade, MVC

Frontend: React, TypeScript, JavaScript, Vue.js, Vite, Tailwind CSS, Bootstrap, HTML5, CSS3

Database: MySQL, SQL query optimization, reporting, data investigation, Linux-hosted database support, IndexedDB

Infrastructure: Ubuntu Linux, Git, Docker, CloudPanel, Dokploy, Apache, Nginx, PHP-FPM, SSH, Cron, Netlify

Professional: Production support, legacy maintenance, code review, QA, release and rollback planning, AI integrations

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Sports City International Inc. | March 2026 - Present

Philippines | Solo full-stack developer supporting business-critical internal systems

- Maintain and enhance legacy and modern Laravel applications supporting document workflows, employee requests, healthcare, reporting, technical support, inventory, manpower, and approval processes.
- Develop backend and frontend features using Laravel, PHP, React, TypeScript, Vue.js, Blade, JavaScript, and MySQL while preserving established production workflows.
- Investigate production bugs, database inconsistencies, access issues, scheduled jobs, queue workers, logs, file permissions, and application behavior across Ubuntu Linux environments.
- Modernized deployments by migrating multiple live applications from manual FileZilla uploads to safer Git-based release workflows with environment, storage, session, permission, and rollback safeguards.
- Support Ubuntu Linux application and MySQL database servers, including Apache/Nginx, PHP-FPM, Cron, CloudPanel, Dokploy, compiled assets, and production configuration.
- Build dashboards, reports, exports, APIs, authentication, role-based access, and approval workflows based on operational requirements.

Full-Stack Developer | TinkerPro Technologies Inc. | Sep 2025 - Nov 2025

Lapu-Lapu City, Cebu

- Developed and maintained backend functionality for production point-of-sale software, including server-side logic, database operations, API endpoints, and interface improvements.
- Built a bulk product import workflow that processed 29,000+ products in 500-row server-side batches to reduce timeouts and improve reliability.
- Created REST API endpoints and a database-driven theme settings feature with live interface preview.

PROJECTS

AI Browser Transcriber (*React, TypeScript, Vite, Web Workers, Transformers.js, Whisper, ONNX Runtime, IndexedDB*)

- Designed a privacy-first browser architecture using Web Workers and client-side AI inference.
- Built to solve a real workflow problem for an ESL teacher who regularly transcribes long classroom recordings. The application currently supports MP3, with future plans to extend support to MP4 audio extraction while preserving local, browser-only processing.
- Optimized the application for long-form MP3 transcription and investigated Safari/iPad compatibility limitations.

Sci-One — Internal Systems & Bulletin Portal (*Laravel, React, TypeScript, Inertia.js, Tailwind CSS, shadcn/ui*)

- Built a centralized internal portal with an authenticated landing page, system directory, frequently used applications, image uploads, and administrator-managed CRUD workflows

Sci-Pulse — Internal Survey & Analytics Platform

- Built an internal survey platform for creating and distributing surveys, collecting employee responses, managing access-controlled share links and reviewing response records.

TinkerPro POS — Product Import & System Enhancements (*Php, MySQL, REST APIs, JavaScript, jQuery*)

- Developed a bulk product import system that processed **29,000+ products** in 500-row server-side batches, reducing timeouts and improving import reliability

EDUCATION

Bachelor of Industrial Technology Major in Computer Technology

CTU CARMEN CARMEN - 2021 - 2026

AVAILABILITY

Open to remote part-time, freelance, contract, and full-time roles.
